

/*

Variables & Data Types: Used const/let for pods, bookings, DOM elements (arrays, strings, numbers).

Control Structures: if/else for validation, switch not used but could be for error handling.

Loops: for/forEach to render table, calculate insights, and check bookings.

Functions: parseStudentIds, isWithinOperatingHours, etc. for modular logic.

Events: Click listeners on book button (submit) and table (remove bookings).

DOM Manipulation: createElement/appendChild for pod options, innerHTML for table/insights,

textContent for errors.

*/
